

# All-in-one Student Information System for European Higher Education

Your institution is Running on 12+ Disconnected Systems. You know this is unsustainable.

## The European Higher Education Reality

- ✓ **Bologna Process compliance is mandatory** – yet ECTS credit management across 180–240 credit bachelor's programmes and 60–120 credit master's remains a nightmare
- ✓ **Ministry reporting deadlines are inflexible** – your team scrambles for days extracting data from multiple databases
- ✓ **Multi-campus coordination is complex** – Athens, Thessaloniki, Rhodes... each campus operates differently

- ✓ **GDPR and International Standards of Quality compliance aren't optional** – yet ensuring it across fragmented systems means constant audit anxiety
- ✓ **Simple questions take forever to answer** – "What's our enrollment by programme?" "Which students are at risk?" "What's our revenue projection?" These shouldn't require a data analyst and two days of work.

## Malta College of Arts, Science and Technology (MCAST)

3 years ago, MCAST faced the same pressures many European institutions face today.

**20,000 students.** Multiple campuses. Disconnected systems limiting scale.

After consolidating operations on **Classter**, MCAST now processes **40% more applications** without increasing administrative staff.

"We were skeptical after two failed platforms and could not risk disruption. Classter migrated our environment behind the scenes without forcing us to halt admissions, giving us the structure to support institutional growth."

## Why Classter Is Purpose-Built for Mediterranean HEIs

Unlike American student information systems retrofitted for Europe or heavyweight ERPs that require armies of consultants, Classter was built from day one for the European Higher Education Area.

### Multi-Campus Management

Unified view across all campuses with campus-specific customization. Athens can operate differently than Crete while maintaining institutional standards and centralized reporting.

### ISO 27001 & GDPR Compliant by Design

Built-in data protection, audit trails, consent management, and right-to-be-forgotten workflows. Pass audits without panic, handle data subject requests without custom development.

### Native Bologna Process Compliance

Automatic ECTS tracking, three-cycle degree management, Diploma Supplement generation. Your registrar staff spend time on students, not spreadsheets.

### Pre-Built Ministry Reports

Generate Greek Ministry of Education reports, Italian MIUR submissions, or Spanish RUCT filings.

### Localized for Mediterranean Reality

English, Greek, Italian, Spanish, French interfaces. Local payment methods. Local academic calendars. Local grading systems. Because your students and faculty deserve software that speaks their language.

### Answer Any Question in Under 60 Seconds

Real-time dashboards for enrollment by programme, revenue forecasts, compliance status, student progression rates.

## DESIGNED FOR EUROPEAN ACADEMIC MODELS

Classter aligns with Bologna, ECTS, and modern governance requirements, so your institution runs with structure, not workarounds.
